DETAILED ACTION

Election/Restrictions

Restriction requirement mailed on 4/23/03 is withdrawn. The special technical feature of obtaining a distribution of signed birefringence values on the basis of birefringence values and directions of phase advance axes is not disclosed by Coriand et al (US 6,423,656).

Priority

Acknowledgment is made of applicant's claim for foreign priority based on an application filed in JAPAN on 07/05/1999. It is noted, however, that applicant has not filed a certified copy of the JAPAN 1999-190117 application as required by 35 U.S.C. 119(b).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 5-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The term "the plane" in claims 5 and 7, lack antecedent basis.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 5-8 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Coriand (WO98/40319). Coriand discloses providing a silica glass member having a distribution of signed birefringence values which monotonously increase from the center to a peripheral portion of a plane (See figure 5d). Claims 5-8 are been considered as product-by-process claims. Consequently, patentability weight is only been given to the claimed product and not the recited process steps, see MPEP 2113. Hence, while Coriand is silent disclosing the claimed process limitations for making the claimed silica glass member it is deemed that Coriand anticipates the claimed product or alternatively it would have been obvious to one of ordinary skill in the art at the time the invention was made that Coriand's silica glass member, while produced by a different process, results in a substantially identical silica glass member as claimed.

Allowable Subject Matter

Claims 1-4 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: The cited prior art fails to disclose or reasonably suggest obtaining a distribution of signed birefringence values on the basis of birefringence values and directions of phase advance axes and cutting a silica glass member whose signed birefringence values monotonously increases from the center to the peripheral portion of the plane that is perpendicular to the rotational axis of the silica glass ingot. The closest prior art (US 6,423,656) fails to disclose or reasonably suggest discloses obtaining a distribution of signed birefringence values on the basis of birefringence values and directions of phase advance axes.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. References A-D have been cited to show the state of the art.
